Location: North East of Kelowna
Near infrared image showing logging clear-cuts which are prevalent throughout much of the Province’s landscape. Fresh clear-cut areas appear in light-cyan, older cuts which have experienced some vegetation re-growth appear in a bright-red colour and untouched virgin forest appears dark red.

Location: Chilliwack
True colour image of the Chilliwack area.

Location: Chilliwack
False colour image was created using long-wave infrared to identify sediment load and the water/land interface. The sediment laden Fraser River appears dark blue where it meets the clear waters draining Harrison Lake. Light purple: Urban development and barren fields; shades of light green & yellow: agricultural vegetation and logging; dark green: forest.

Location: Chilliwack
This false colour image displays areas of agricultural irrigation. Bright red: circular patterns depict healthy vegetation growth.
